

② DECISION VARIABLES

$x_c \in \mathbb{Z}$: # of furniture sets to be acquired from Caroline Woodworks

similar for x_N, x_A, x_L .

$z_c \in \{0,1\}$: 1 if we purchase anything from Caroline Woodworks; 0 otherwise

similar for z_N, z_A, z_L .

② OBJECTIVE FCT.:

minimize

$2,500 x_c + 10,000 z_c + \dots$
... \Leftarrow please don't do RP in assignments/exams!

③ CONSTRAINTS:

$$x_c + x_N + x_A + x_L = 2,000$$

$$x_c \leq 1,000, \quad x_c \leq M \cdot z_c$$

$$x_c \leq 1,000 \cdot z_c$$

$$x_N \leq 1,200 \cdot z_N$$

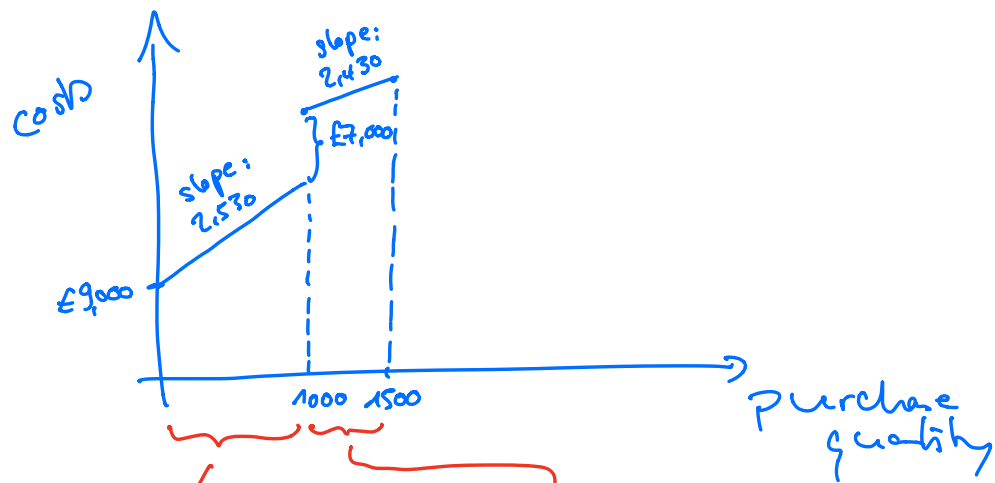

$$x_A \leq 800$$

$$x_L \leq 1,100 \cdot z_L$$

$$x_c, x_N, x_A, x_L \geq 0$$

⑥

Delaware Mills:

add to the objective function:

$$+ 9,000 \cdot z_s + 2,530 x_s$$

$$+ 7,000 \cdot z_B + 2,430 x_B$$

add the constraints:

$$x_s \leq 1,000 z_s$$

$$x_B \leq 500 z_B$$

$$x_s, x_B \in \mathbb{Z}, x_s, x_B \geq 0$$

$$z_s, z_B \in \{0, 1\}$$

z_B is only allowed to be 1 if $x_s = 1,000$!

$$z_B \leq \frac{x_s}{1,000} !$$
